Detailed Description:

...value-added content and services ("VACS"). Moreover, optionally, playback control is offered to the content owners through a combination of watermarks, digital signatures and encryption.

Audio Watermarking Overview An **audio watermark** is data that is embedded directly within the audio signal itself. The **audio watermark** is imperceptible by humans, but can be read by computer software. There are many companies that supply **audio watermarking** technology. The present system can use any **audio watermarking**, as long as (i) it is not perceptible by listeners, (ii) it is difficult to remove, and (iii) there are enough bits available in the watermark payload for our particular needs.

Presently there are various types of **audio watermarks** available, which are broadly classified into two groups: static and transactional.

A static watermark is embedded once per master copy, usually by the content owner...content and services, and may offer the content owners a certain amount of content protection.

The additional information can be included in an in-band **audio watermark** and/or an out-of-band header. The main advantage of placing information in a watermark is that the **audio watermark** is robust (i.e., it is very difficult for someone to remove the information). The disadvantage is that there are not many bits available to embed robustly and inaudibly in a watermark. In addition, **audio watermarking** can be expensive from a time, cost and computational perspective, especially if a watermark is embedded in a transactional manner.

On the other hand, it...amount of forensic ability to trace the origin of an illegally modified file. In the example below, the content owner includes the RetailerID in an **audio watermark** (which identifies the retailer who sold the file), and a retailer includes an individual consumer's UserID in the watermark just before it is sold...

Claims:

...the presentation of said digital content.

13. The method of claim 12 wherein said digital content is an audio clip and said watermark is an **audio watermark**.

14. The method of claim 10 further comprising generating a modified header identifying a second user and sending said modified header.

15. The method of...
